★ 3D Hand Drawing

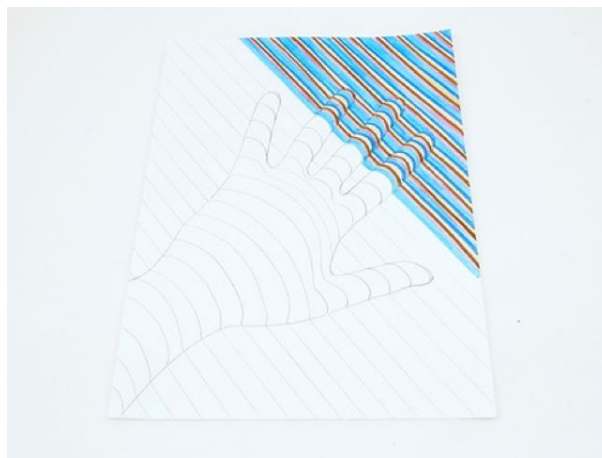

- *Learn how to create a 3D optical illusion*
 - Do this either in your sketchbook or on a separate sheet of paper.
 - 1. Place your hand on a blank sheet of white paper, and use a pencil to trace its outline.

- 2. Using a ruler to help guide you, draw lots of evenly spaced lines across the page. Make the background lines straight, and curve the lines inside the hand.

- 3. Select several bright colors, and trace over the lines. Fill the space between the pencil lines with more marker lines. Repeat the colors in a pattern on the page for a fun effect!

- 4. Continue to draw colorful lines over the page. When complete, you will have a cool 3D hand drawing!
